Juuust to make sure: does that Excel file you just sent me replace the one on THIS page?

<http://www2.epa.gov/goldkingmine/gold-king-mine-data-august-13-2015>

Granted, I DID just add a second Excel file to that page not long ago.

So, I might be mistaken. Is it for another page? Help! ☺

I also just updated this page:

<http://www2.epa.gov/goldkingmine/gold-king-mine-data-august-15-2015>

So...I'm trying to figure out where to put this Excel file...Inquiring minds want to know... ☺

Melissa:

I have reviewed the data set. There are no issues with the data itself. Results are consistent, units appear correct, and there appears to be no anomalies in the data set. No dissolved metals exceeded recreational screening values originally developed by the UC. I have edited the table submitted by the Region to do the following:

1. I removed the PCL column. These are comparison values similar to MCL and we do not want to post those values.
2. I have removed yellow highlighted results, as those were values that exceeded the MCL.
3. There was a "sediment tab" on the worksheet. This was the exact set of data in the surface water tab, so I deleted the sediment tab.

This data should now be available to post.

Terry, the 8/9 data has been posted, but not the 8/10 or 8/11.

The PCL column needs to be removed
then it can be posted. . . . But hasn't this already been posted already late this afternoon???

Terry,

This data is ready to be reviewed by the HQ EOC. Note, the Region does not want to do any messaging for this data, they just want to post it.

Thanks,

Kathie

Attached please find, thanks to START, a user-friendly version of the validated data collected along the San Juan River for 8/9, 8/10 and 8/11.

The original START spreadsheet contained 2 rows of data on potassium for both dissolved and total (b/c Excel interpreted the

CAS# for some samples as a date rather than a CAS# number). I believe I have correctly incorporated all of the potassium data into a single row for each sample type, but have not yet been able to confirm this with START. However, potassium is not a metal of concern with regard to this incident so we have decided to send this out in the interests of timeliness.

Please note that the columns representing the various sampling locations may be in a different order than previous tables you have seen and take this into account as you review or compare the data.
